

Project Proposal SWEN 102	
Project Background and Description	<p>“Welcoming Web” is an internet/media literacy website that is inclusive, accessible to all, and is a friendly/warm/’welcoming’ environment to help all generations learn to navigate our growing technology with a smart yet open mind.</p>
Project Scope	<p>The current scope of the project is to create one “educational game” that teaches/introduces the user to a specific issue. If time permits, then the team will set up the site with a model article for users to follow when submitting internet-related topics.</p>
Resources	<p>The original idea of the project was to use WebGL and JavaScript, however, WebGL seems beyond the scope for JavaScript beginners. The team will be using p5.js, as they align with our ideals about inclusivity and accessibility for all.</p>
Deliverables	<p>The deliverables will come in the form of several check-ins using Trello and coming to meetings to show current progress made.</p>
Value	<p>The project brings value to the team members by creating an environment to learn simultaneously about UI/UX, JavaScript, and about bringing inclusivity and accessibility to any future project.</p>
Final Presentation	<p>The final presentation will be a demo for the website and “educational game.”</p>
